

ABSTRACT

To provide a magnetic toner which: enables a stable image density to be obtained irrespective of a use environment; and exhibits excellent low-temperature
5 fixability, little image deterioration upon fixation, high coloring power, and a reduced toner consumption. The present invention relates to a magnetic toner containing at least: a binder resin; and a magnetic
body. The binder resin contains a polyester unit. The
10 toner has a weight average particle size of 5.0 to 9.0 μm , a true specific gravity of 1.3 to 1.7 g/cm^3 , and a saturated magnetization of 20 to 35 Am^2/kg in a magnetic field of 796 kA/m . The dielectric loss tangent ($\tan\delta$) of the toner satisfies ($\tan\delta_H -$
15 $\tan\delta_L$)/ $\tan\delta_L \leq 0.20$ at 100 kHz.
